

Oracle Application Express for Developers

Length: 3 Days

Audience: Programmers and Application Developers

Prerequisite: Oracle 10g SQL & SQL*Plus, Oracle 10g PL/SQL Programming, and a basic knowledge of HTML.

Overview: This course is intended as an introduction to Oracle Application Express. In this course students are introduced to the components of Application Express and the wizards used in building database-centric web applications. In addition to learning how to build applications, students will be introduced to the SQL Workshop and Utilities available with Oracle Application Express.

Topics discussed include:

- Overview of Oracle Application Express
- Interacting with the Database Using SQL Workshop
- Building an Application
- Creating Reports
- Creating Forms
- Working with Pages and Regions
- Adding Items and Buttons
- Understanding Session State
- Including Page Processing
- Adding Shared Components
- Displaying Dynamic Content
- Working with Themes and Templates
